

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

A blue rectangular sign with white text. The text is arranged in two columns: 'PACIFIC NW' on the left and 'SOFTWARE QUALITY CONFERENCE' on the right. The sign is supported by two orange pillars with horizontal lines at the base. The background features a stylized cityscape with orange buildings, grey towers, and a black mountain silhouette with white snow. There are also some white clouds and small blue flying objects.

PACIFIC NW SOFTWARE
QUALITY
CONFERENCE

THE FUTURE IS NOW

[PNSQC.ORG](https://pnsqc.org) **OCTOBER 14-16 2024**

Meet the author

- Senior **Fraud Analyst** at **Klarna**
- Passionate about **data quality**
- **Hobbies**
 - organize AI/ML developer meetups
 - boardgames
 - Toastmasters

Outline

- **Why** should we care about **data quality** in Credit Card Fraud Prevention?
- **What** data quality **problems** do we encounter?
- **How** shall we **solve** the problems?

Why should we care about data quality in Credit Card Fraud Prevention?

Credit Card Fraud Prevention is important

- **\$10 billion** in consumer losses from credit card frauds in the US
- ~ **150k US households'** annual expenses

This domain heavily relies on data

- Behavioral analysis
- Fraud attacks
- Investigations

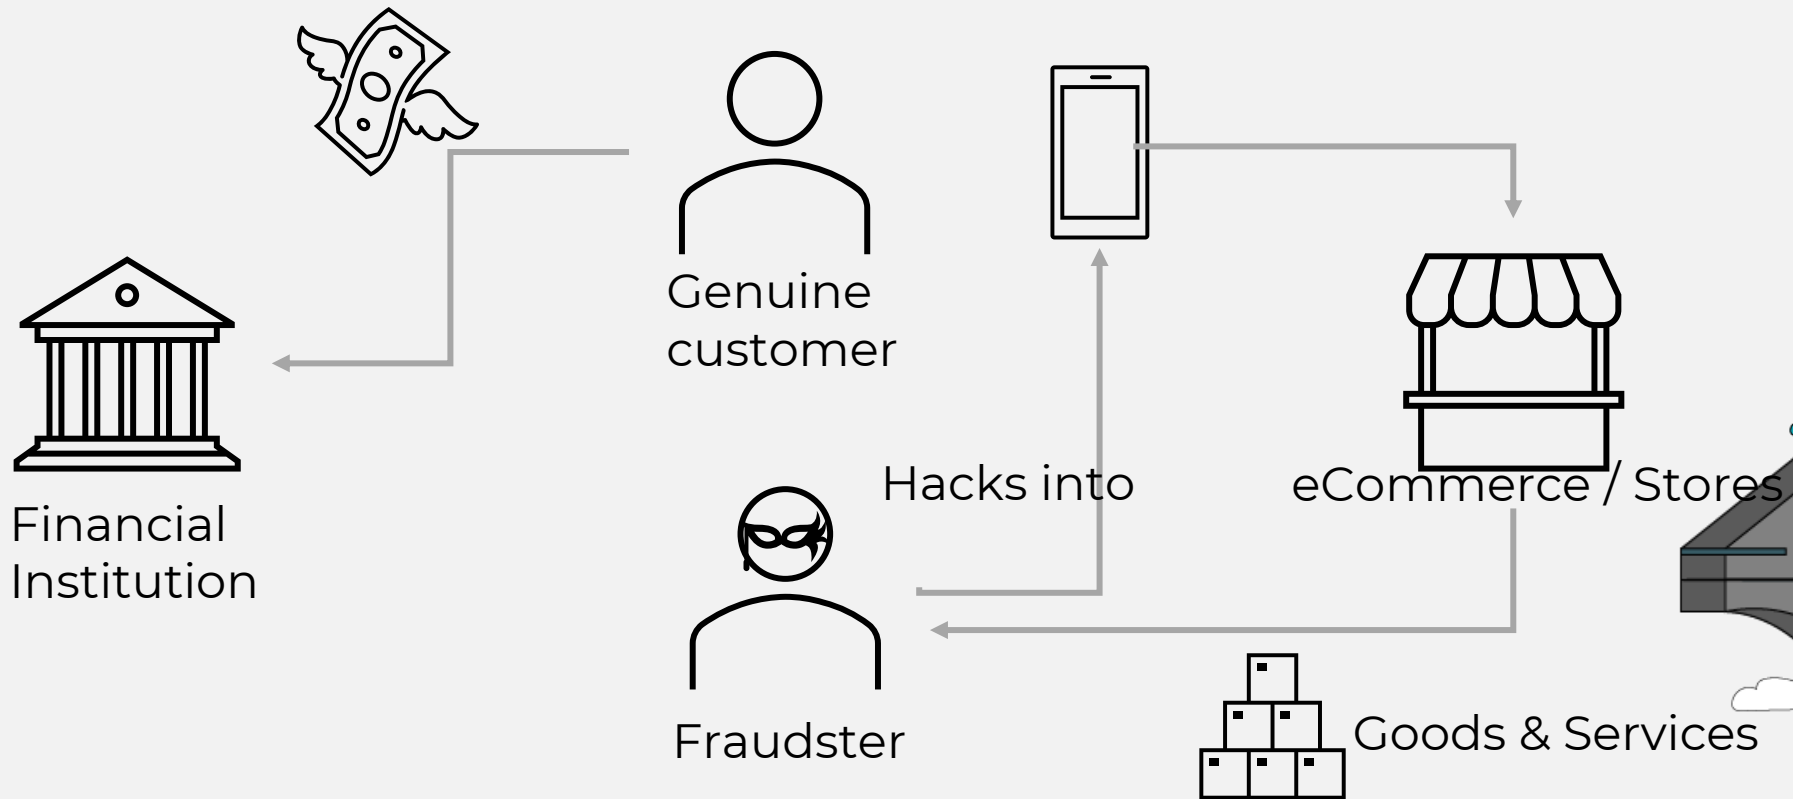

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

How are frauds conducted

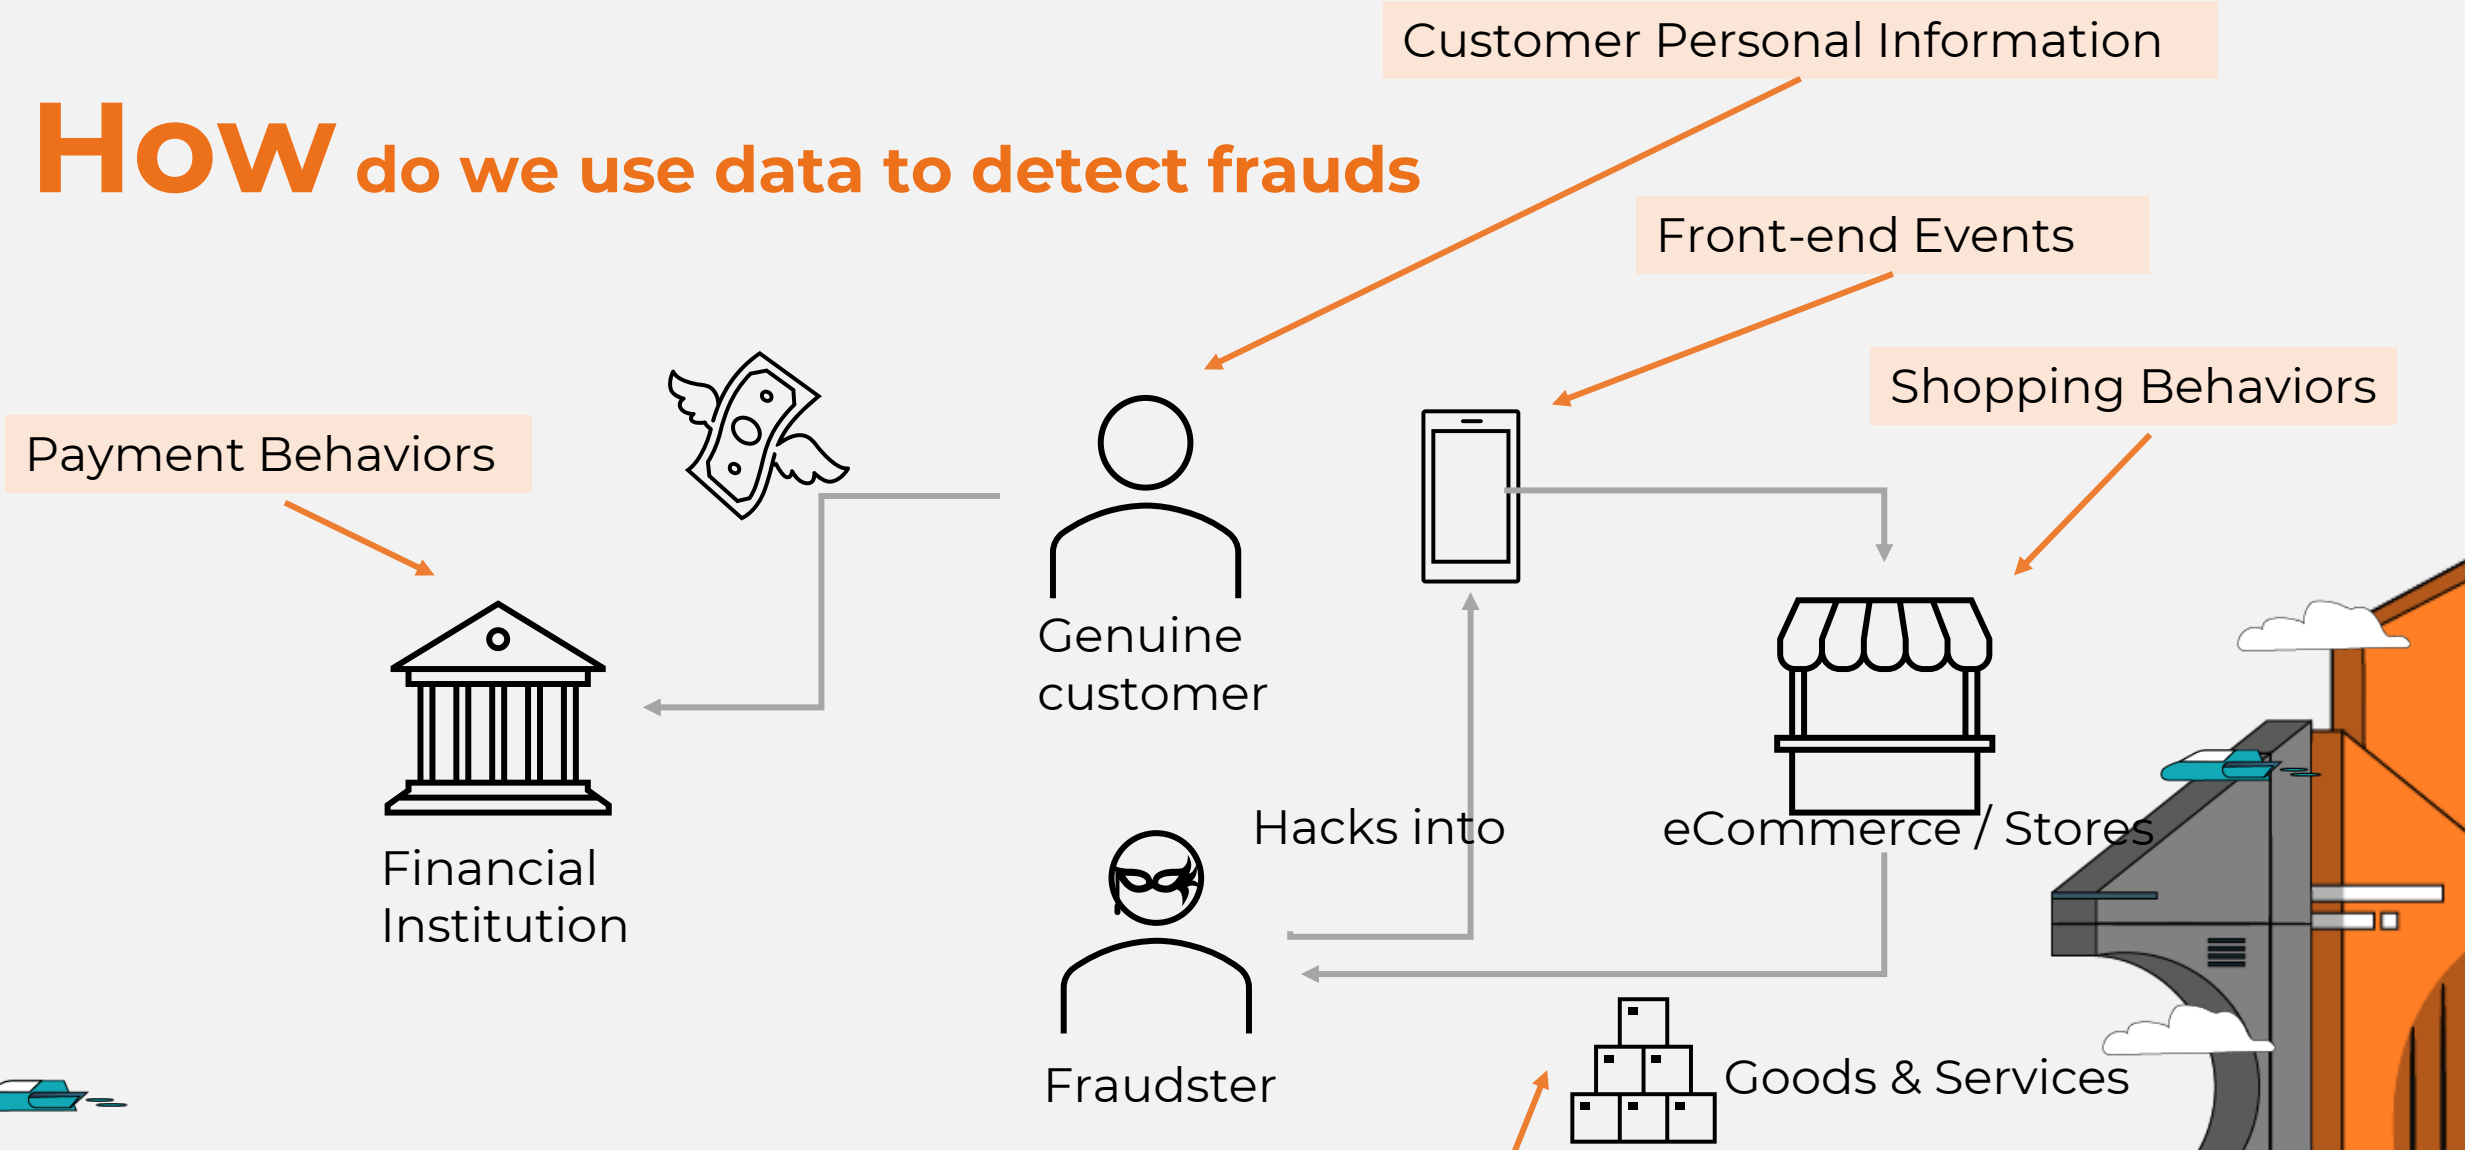

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

How do we use data to detect frauds

Customer Info (e.g. Shipping Address)

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

What data quality problems do we encounter?

- **Types** of data used

- Customer Personal Information
- Transactions
- Front-end Events
- Behaviors
- External Data Sources
- Disputes

By Nature of Data

- Imbalanced Data
- Wrong Labels
- Incomplete Data

Yuqing Yao

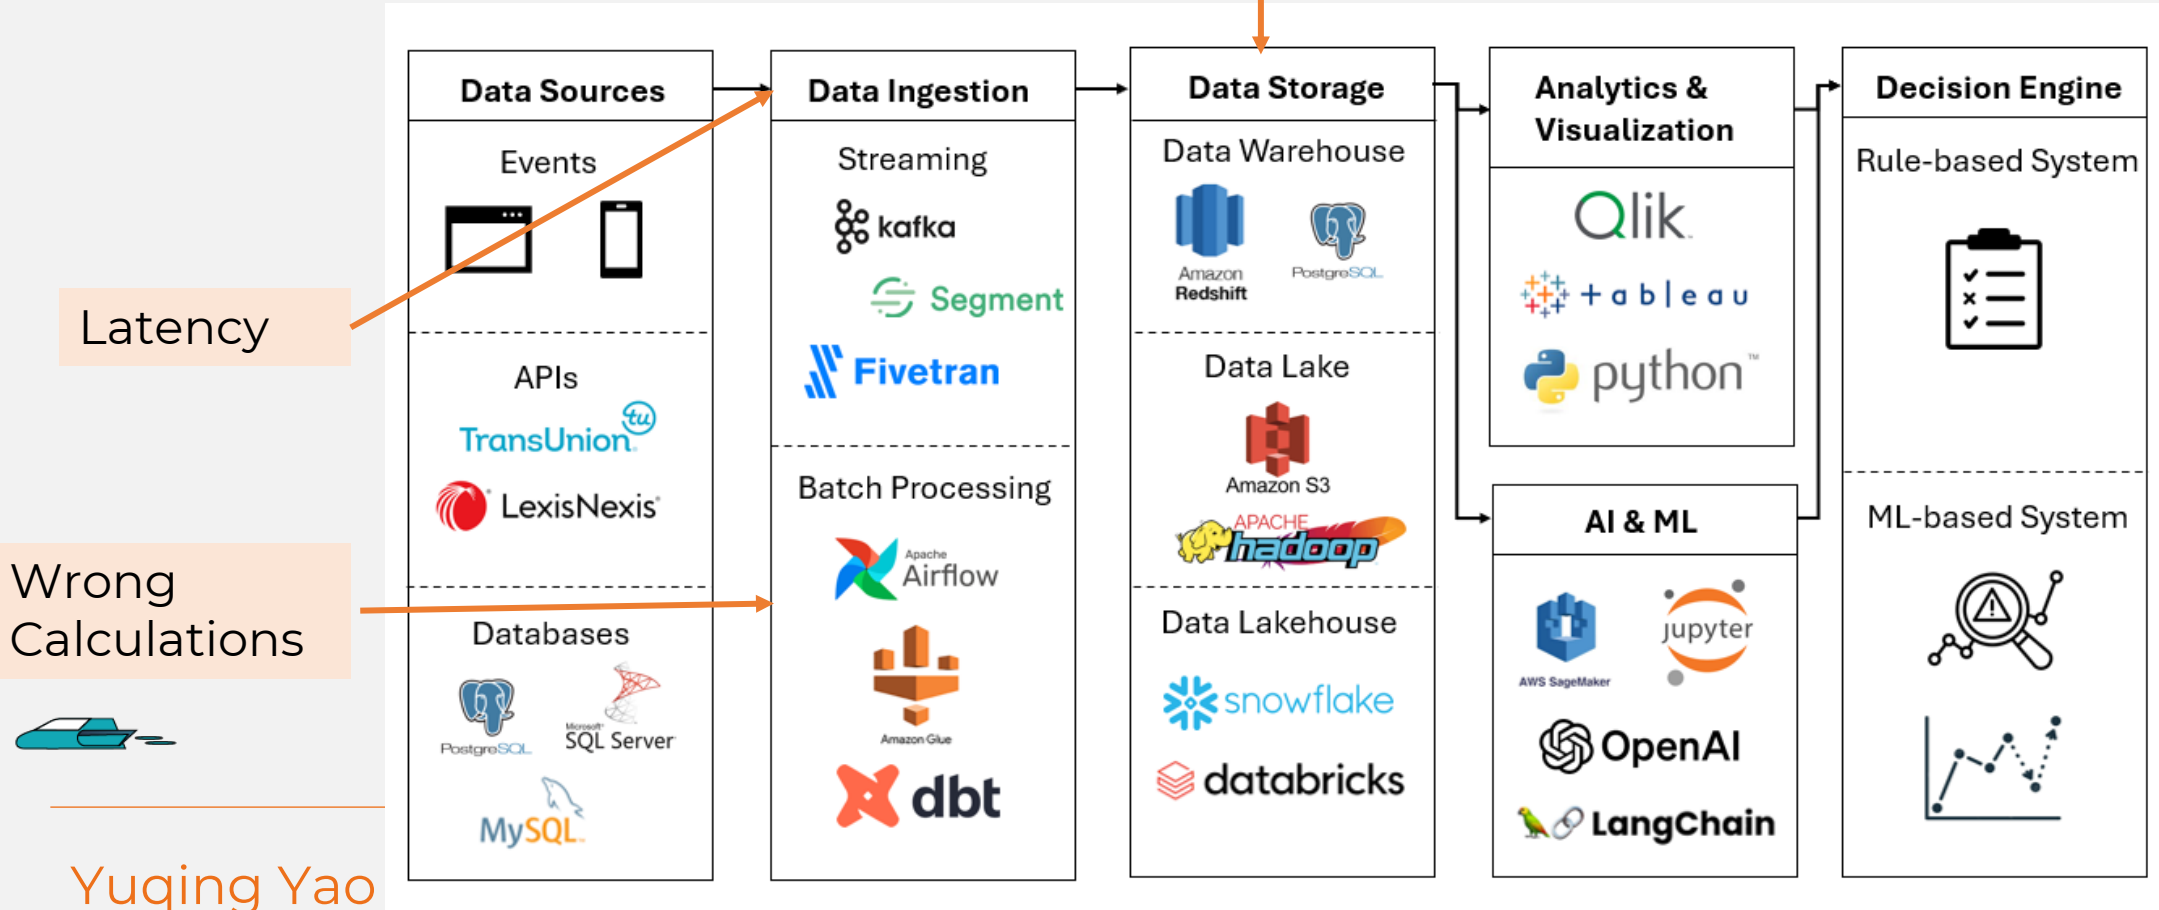

Data Quality Assurance in Credit Card Fraud Prevention

Data Silos

What data quality problems do we encounter?

- **Data Stack** – Procedures in Credit Card Fraud Prevention

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

What data quality problems do we encounter?

- By Nature of the Task
 - Afterthought of the Business
 - Data Quality Assurance could be Tedious

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Recap of data quality problems

By Nature of Data

- Imbalanced Data
- Wrong Labels
- Incomplete Data

By Procedure

- Latency
- Wrong Calculations
- Data Silos

By Nature of the Task

- Afterthought of the Business
- Data Quality Assurance could be Tedious

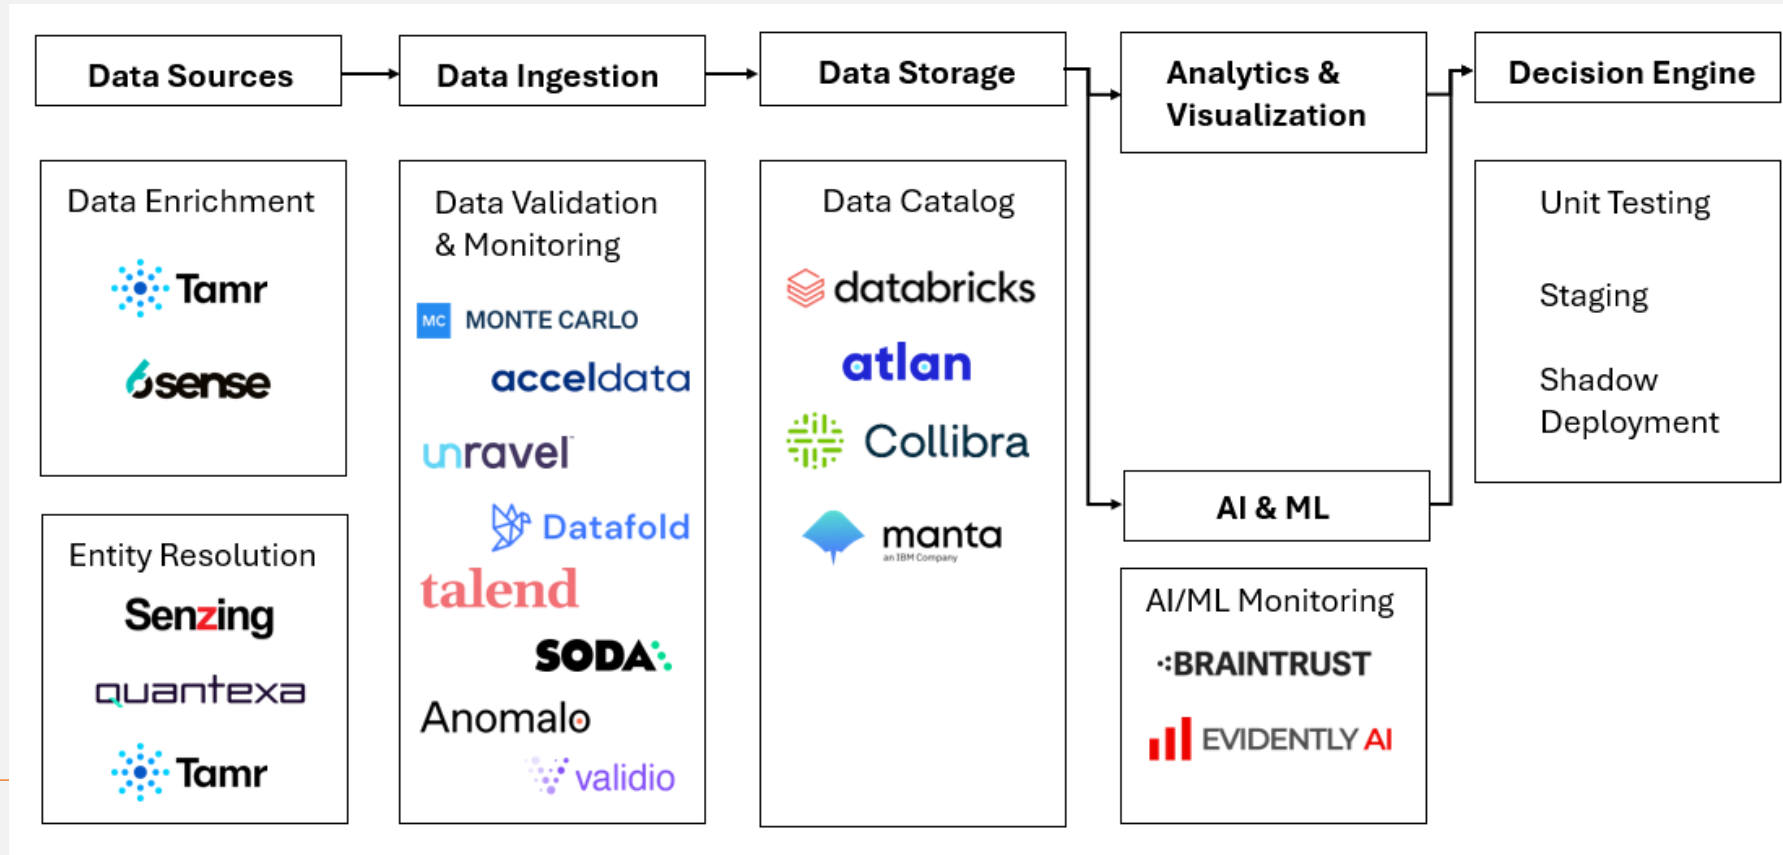

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

HOW shall we solve the problems?

- Solutions / Tools

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 1 Wrong labels

- What is the problem?

| customer | transaction_date | dispute_date | dispute_reason | amount |
|------------|------------------|--------------|----------------|--------|
| John Smith | 2024-01-01 | 2024-01-03 | NULL | 24.99 |

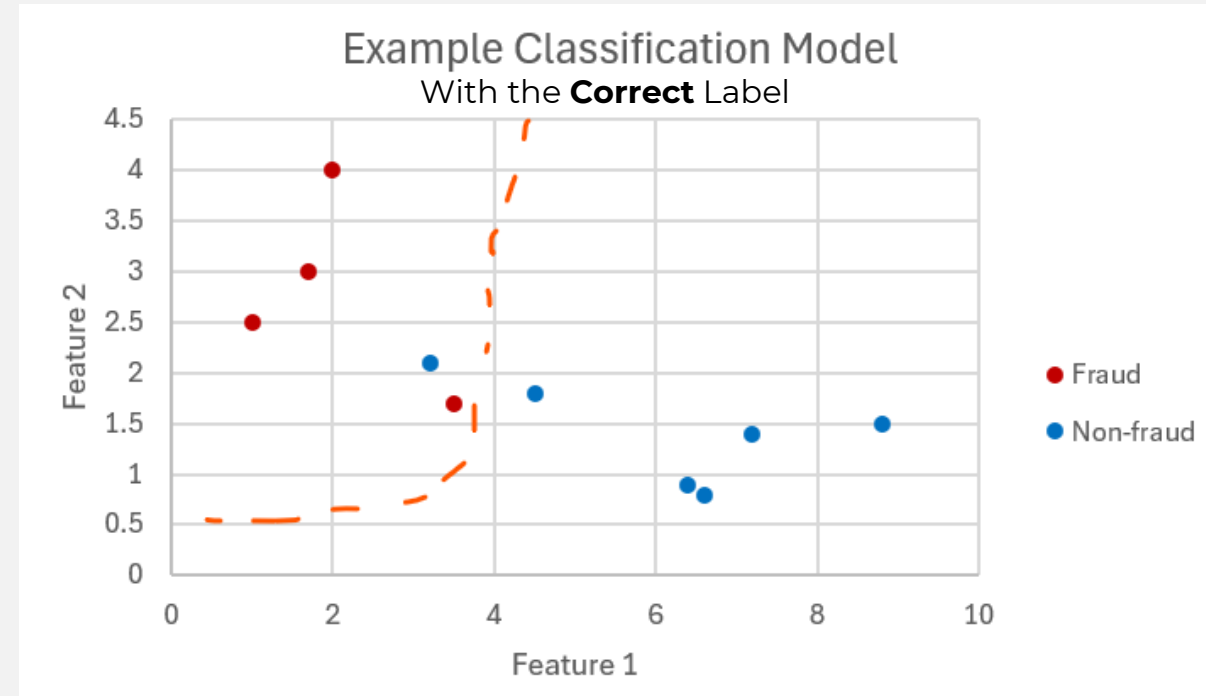

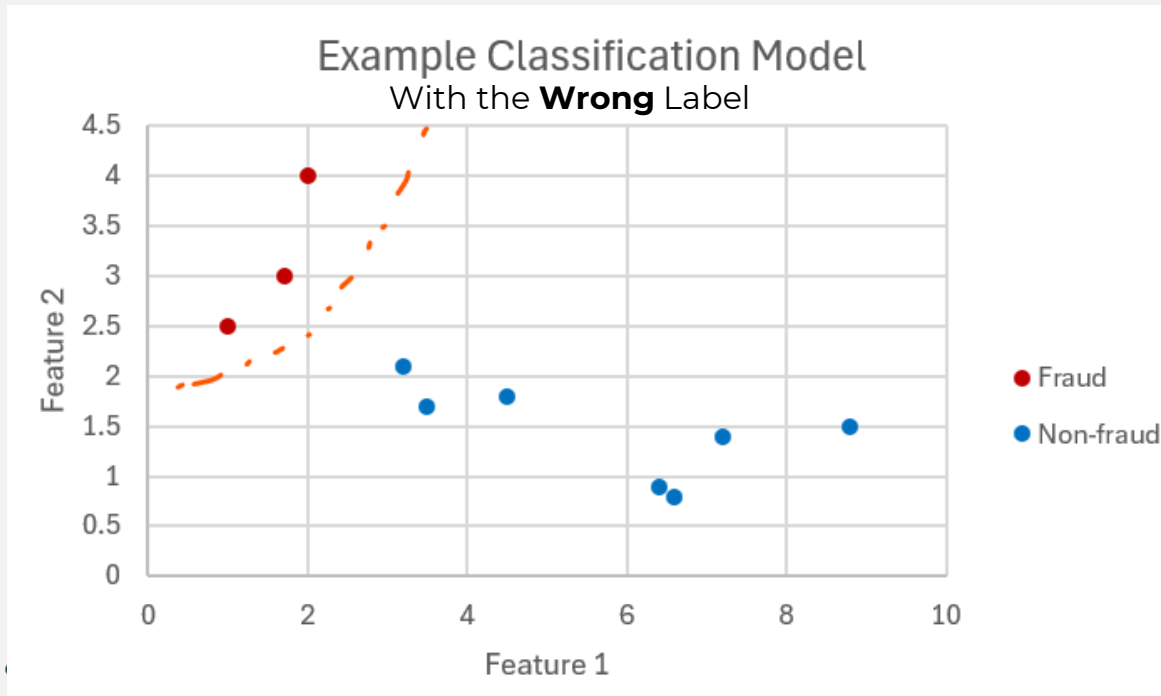

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 1 Wrong labels

- Why is it a problem
 - Misleads supervised learning or statistical analysis

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 1 Wrong labels

- What caused the problem?
 - No data validation during entry

Dispute Reason:

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 1 Wrong labels

- What's the solution
 - Design the workflow to enforce data entry
 - Data validation during entry

Dispute Reason *:

Returned Item

Returned Item

Wrong Item

Unauthorized Transaction

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 1 Wrong labels

- What's result
 - Higher rate of data being populated
 - More standardized values

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 2 Abnormal values

- What is the problem?
 - Certain attribute suddenly has more occurrences of extreme values (e.g. 9999)

| Feature 1 | Feature 2 |
|-----------|-----------|
| 2 | 8 |
| 1 | 9 |
| 5 | 2.3 |
| 7.6 | 2.1 |
| 6.7 | 9999 |
| 4.5 | 1.8 |
| 6.4 | 9999 |
| 6.6 | 0.8 |
| 7.2 | 1.4 |
| 8.8 | 1.5 |

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 2 Abnormal values

- Why is it a problem
 - Misleads the unsupervised learning models

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 2 **Abnormal values**

- What caused the problem?
 - Vendor changed its missing value definition
 - Upstream team changed how they fill in missing values

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 2 Abnormal values

- What's the solution
 - Set up monitoring based on business logic and corresponding alerts

| Definition Name | Condition | Action |
|-----------------|------------------------------------|--|
| Column A | X% values over 2 SD (last 1 month) | <input type="text" value="Alert"/>  Alert Warning Recover |

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 2 Abnormal values

- What's result
 - Discover data errors before they contaminates the model training
 - Fix the problems in time

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 3 Disconnected data

- What is the problem?
 - Customer created different accounts using different set of contact info

| | |

| Name | John K.P. Smith |
| Email | johnisawesome@gmail.com |
| Phone | +14159999999 |
| Address | 123 ABC St, San Francisco, CA |

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 3 Disconnected data

- Why is it a problem
 - These records are physically the same person, but digitally treated as different people
 - Mistakenly upsample or downsample frauds
 - Miss out fraud rings

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Example 3 Disconnected data

- What caused the problem?
 - Data collected from different sources (Marketing / Log-in / vendors)
 - How records are created naturally cause this problem

Yuqing Yao

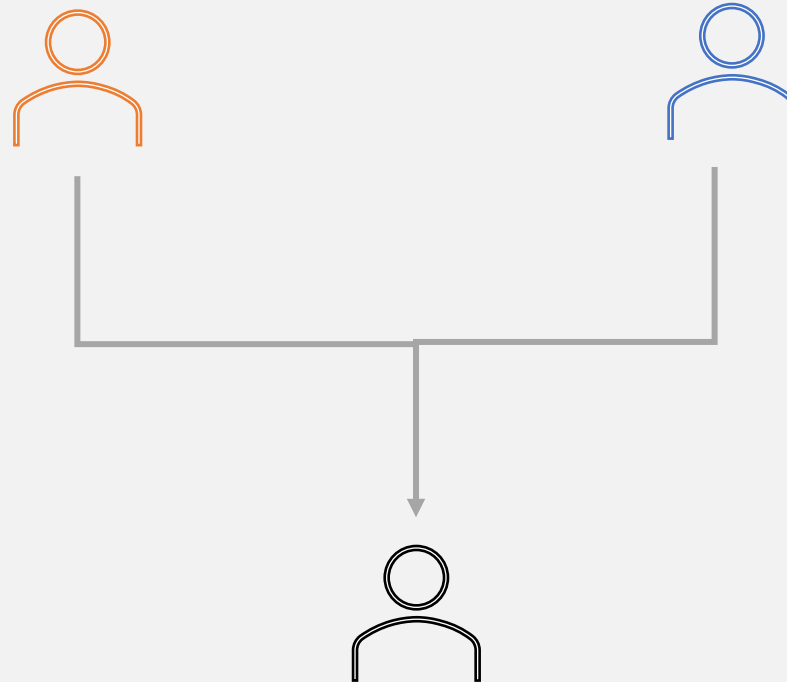

Data Quality Assurance in Credit Card Fraud Prevention

Example 3 Disconnected data

- What's the solution
 - Entity resolution

John Smith
js95@gmail.com
+14159999999

John K.P. Smith
johnisawesome@gmail.com
+14159999999
123 ABC St, San Francisco, CA

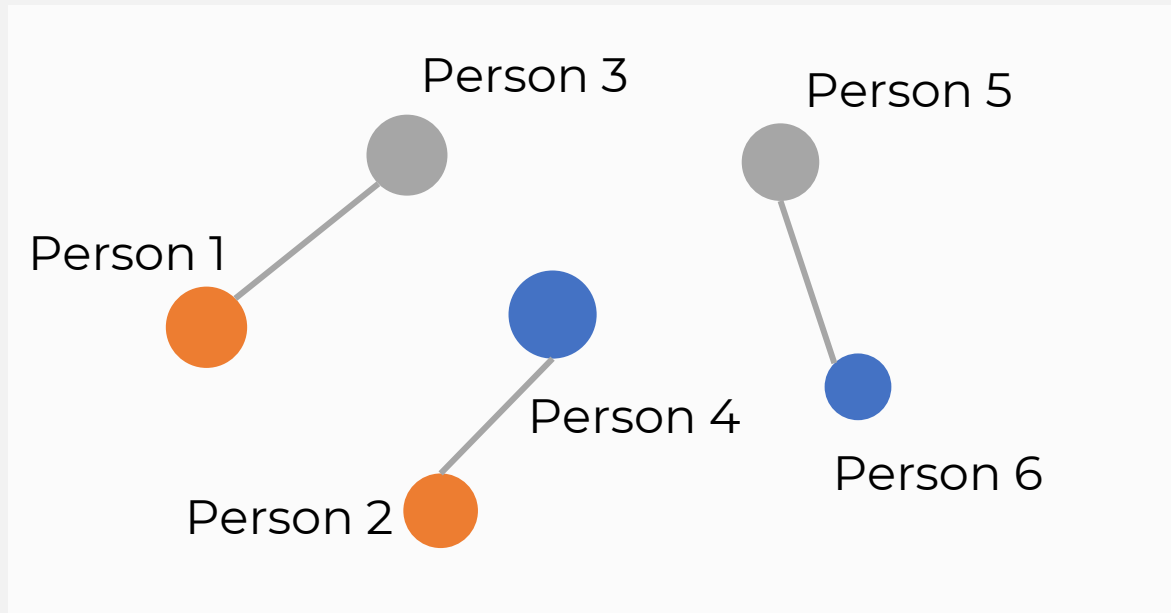

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

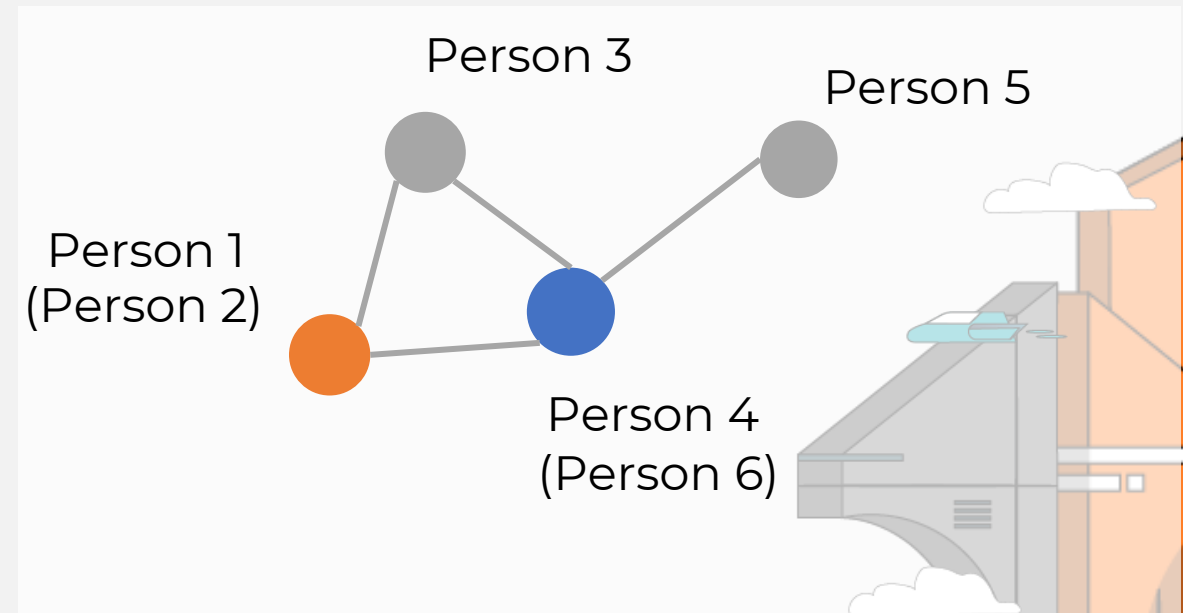

Example 3 Disconnected data

- What's the result
 - Discover new fraud rings and unreported frauds

Before Entity Resolution

After Entity Resolution

Recap of examples

| | Wrong labels | Abnormal values | Disconnected data |
|----------|--|--|--|
| Impact | Misleads supervised learning or statistical analysis | Misleads the unsupervised learning | Mistakenly upsample or downsample frauds; Miss out fraud rings |
| Cause | No data validation during entry | Upstream processes changed filler values | Data collected from different sources |
| Solution | Data validation + Better UI | Set up monitoring based on business logic and corresponding alerts | Entity resolution |
| Result | More standardized values | Discover and fix data errors | Discover new fraud rings and unreported frauds |

Yuqing Yao

Data Quality Assurance in Credit Card Fraud Prevention

Conclusion and Future Improvements

• Conclusion

- Data quality is **important** in Credit Card Fraud Prevention because each piece of missing info contributes to solving the case
- Data issues can be **caused by** the nature of the data, procedures involved, and the nature of the task
- **Solutions** of the data issues lie in using good tools and controls during each step of conducting Credit Card Fraud Prevention, including data validation, entity resolution, data enrichment, data monitoring, and data catalogs

Conclusion and Future Improvements

- Future Improvements

- Use real-world **case studies** of FinTech companies to show the impact of applying the best practices of data quality assurance, and how that prevents losses
- Discuss **how AI is used** in Credit Card Fraud Prevention and how **AI observability** should be conducted in this field
